While some competitors rush to market by replicating O.E. blower motors with inherent flaws, Four Seasons® takes the steps to develop a solution! We invest the time for engineering, testing, validation and quality control processes. Our designs not only provide the correct fit and form, but in many cases, they are an overall improvement to the O.E. unit.

**FOUR SEASONS® FACT SHEET**

**P/N 75850**

**Infiniti (12-05) Applications**

**Nissan (12-03) Applications**

Four Seasons® redesigned motor resolves several issues associated with this O.E. unit for these applications. **Issues include insufficient cooling, exposed circuit boards and loosely attached electronics that can fail from common vehicle vibration.** Our design features airtight sealed electronics with stall and surge protection, EMI suppression and an integrated cooling tube for extended motor life.

**FOUR SEASONS® MOTOR**

- Integrated Cooling Tube for Improved Motor Life
- Hermetically sealed electronics for complete protection

**COMPETITOR “T”**

- Vent in One End of Motor Only
- No vent tube to create a pressure differential and drive cooling air through the motor.
- No sealing/ protection of heat sink & electronics - A single drop of moisture or corrosion will damage the electronics and potentially cause a thermal event.
- Leak path from heat sink directly above PCB
- Electronic loosely attached (vibration concern)
- Exposed traces on PCB

**Infiniti (12-05) Applications**

**Nissan (12-03) Applications**

Integrated Cooling Tube for Improved Motor Life

Hermetically sealed electronics for complete protection
WE DO WHAT OTHERS MAY NOT NOT

• Integrated Cooling for Motor and PWM
• Four Seasons® Designed Blower Wheels
• PWM is Self Contained and Fully Programmable to Accept Various Input Signals
  • Hermetically Sealed Electronics
  • Stall Protection Incorporated
  • Reverse, Over and Under Voltage Protection
  • EMI Suppression
  • Current Limited Protection
  • Thermally Protected Electronics
• Long Life Brushes in the Motor
• Proven and Tested Motor Design
• -104°F to 176°F Ambient Operating Temperatures

INTELLIGENT CONSOLIDATION

When engineering our own unique improvements, we have found ways to develop motors that not only cover one application, but cover multiple! Our consolidation efforts allow for increased shelf space, reduced inventory and cost savings over the competition.

While we build one motor, our competition builds as many as 7!

75830
One motor replaces 6 different O.E. motors that are used on 18 different vehicles!
